Manitowoc County **Lake Michigan Creel Report – Week of October 26-31**

Unfavorable fishing weather and the changing of the seasons made for a poor fishing week in the Manitowoc and Two Rivers area. Few, if any anglers were out in boats or fishing the harbor and piers this week because of the rain and wind last week.

A little more activity was found in local rivers this week. On the West Twin River, Chinook salmon anglers were still having some success at the Shoto dam where high water and fast current pulled a good number of fish back up to the dam. Chinooks were active in the river and many anglers were landing some large salmon ranging in weight from 15 to 19 pounds, however the quality of the Chinook salmon has been declining rapidly.

On the East Twin River, fishing pressure was low on Saturday. The section of river just below the dam was very turbid making the river appear much more brown than normal and this may have discouraged fishermen from trying their luck.

NOTE: This is the last weekly creel report for the year for the Manitowoc/Two Rivers area. Reports will resume next March when the creel survey starts again
