

Hello everyone.

First, you probably noticed that Waldo Blvd was closed from 8th St west to 14th St early this morning. This portion, along with the portion of Waldo east of 8th St to the roundabout, will be closed until mid November. I received a few questions about driveway access. Here are some general guidelines for you if you live along the project:

- Crews will be working on both sides of the street at different times. Although there are barricades across the lanes, you still have access to your property. There may be times that you will have to drive against "normal" traffic pattern on the wrong side of the street. That is perfectly fine within the closed portion of the roadway.
- If your specific driveway needs to be closed in order to install a pipe, place concrete, etc, you will be notified prior. The same thing goes for any planned water service interruption. Note that last week there were a couple unplanned water interruptions. Obviously since they were unplanned we were unable to notify those residents prior.
- Access onto Waldo Blvd for residents will be via 11th St (for those of you west of 8th St) and 6th St (for those of you east of 8th St). We will do our best to accommodate additional access, but it cannot be guaranteed.

Now, onto a project update. In the near future you can expect:

- A closure of 8th St at Waldo will be put in place starting Tuesday June 11th and lasting through the day on Friday June 14th. You will not be able to cross Waldo Blvd during that timeframe. Please plan an alternate route.
- At the roundabout, crews have finished concrete pavement, asphalt pavement, and sidewalk. They are working on landscaping, signing, and a few other items. The plan is to switch traffic into the roundabout as early as next week. Once traffic is switched, the east half of the roundabout will be under construction.
- Crews started breaking pavement west of 8th St this morning. Next week you can expect to see being removed, and the start of installing underground utilities west of 8th St. Street lighting is being taken down today in this area.

If you have any further questions, please do not hesitate to email or call. If you do leave me a message specific to your property, please let me know what your address is so that I can answer your questions with more specifics.

Thanks,

Corey Schuh, PE
